SUMMARY

A Bachelor of Applied Informatics Engineering graduate from Universitas Logistik dan Bisnis Internasional with practical experience in developing RESTful APIs and backend systems. Skilled in database design, authentication implementation, and backend service development for web and mobile applications through internships and projects. Possesses strong problem-solving and teamwork skills, with a broad interest in information technology, including software development, technical support, and computer networking. Committed to continuously improving technical skills and developing reliable and efficient technology solutions.

EDUCATION

Bachelor of Applied Informatics Engineering **2022 - 2026**
Universitas Logistik dan Bisnis Internasional
GPA 3,65/4,00

INTERNSHIP EXPERIENCE

Junior Back End Developer - PT Pos Indonesia **Oct 2025 - Jan 2026**

- Engineered a Mailroom Information System backend using Go and MongoDB, implementing JWT authentication and secure CRUD operations.
- Designed a scalable NoSQL document schema utilizing BSON/JSON structs to optimize data handling and ensure seamless data synchronization.
- Developed and deployed RESTful APIs to Heroku, successfully establishing a production environment integrated with a Flutter mobile application

PROJECTS EXPERIENCE

Mail Delivery SLA Prediction Dashboard **2026**
Developed a mail delivery delay prediction system using Python, XGBoost, and PSO, with SHAP for model interpretation and Genetic Algorithm for posting schedule optimization.

Elfume Android Application - Back End Developer **2025**
Engineered a mobile perfume e-commerce application using Flutter (Kotlin) Go Fiber backend and MongoDB database.

Idbiz Graphic Design Service Platform - Back End Developer **2025**
Developed a service marketplace platform utilizing JavaScript , Go Fiber for backend API, and MongoDB NoSQL for persistent data management.

ORGANIZATION EXPERIENCE

Himpunan Mahasiswa Teknik Informatika (HIMATIF) - Development Team **2023 - 2025**

- Developed and maintained software applications to support academic and scientific programs.
- Organized technical study groups, workshops, and knowledge-sharing sessions on software engineering.
- Collaborated with team members to explore backend development and data science technologies for solving academic challenges.

Himpunan Mahasiswa Teknik Informatika (HIMATIF) - Mentor Coordinator **2025**

- Served as Mentor Coordinator and Mentor for MORRIS IF 2024, an orientation program for new Informatics Engineering students.
- Coordinated and managed mentors and new students across 8 groups to ensure smooth program activities.
- Guided and assisted new students throughout the orientation program, supporting their adaptation to the academic environment.

TECHNICAL SKILLS

Programming & Frameworks:
Go Language, Flutter, Dart, Fiber, Gorm

Tools:
Git, Postman

General & Complementary Skills :
Microsoft Office, Technical Documentation, Time Management, Teamwork, Problem Solving

PUBLICATIONS

PSO-Optimized XGBoost for Mail Delivery Delay Prediction and Logistics SLA Compliance **2026**
JITK (Jurnal Ilmu Pengetahuan dan Teknologi Komputer) - SINTA 2

LANGUAGES

Indonesia (Native), English (Intermediate)
